2. TECHNICAL SPECIFICATION:

A. FOR P.B. AREA
   a) The materials and their standards will be as indicated in the Drawings.
   b) The main load bearing components of the Cage Structures such as drawbar fixing attachment of suspension gear, of balance rope attachment, hanger flats and other load bearing members of the structure will be tested for cracks and other flow by Ultrasonic and magnetic methods and will conform to DGMS guidelines for safety norms. A test certificate of CMRI / NTH to this effect will be submitted along with the supply.
   c) The prospective bidders should visit the site, Putki – Balihari project of P.B. Area and collect the other related drawings (13 Nos.), before quoting against this tender.
   d) The structures will be given two coats of red-oxide paints before finishing it with anti-rusting paints.
   e) The cages will be delivered at the site (Putki - Balihari Project).

B. FOR MOONIDIH PROJECT:
   (a) The cage is subjected to a load of 30 tonnes at a speed of 8m/sec. with a factor of safety of 9.
   (b) The material of rivets as per IS : 1149 : 1957
   (c) The material of Drawbar fitting plates & the associated plates on top of the cage and the balance rope attachment fitting sections and the associated side plates in the bottom of cage must be of 20 Mn2 grade.
   (d) The eight main holding strips (180mm X 12mm X 9400mm) to be used in single length. The material of the hangers is C45 Gr. Steel. If the hangers are not available in single length, joints allowed as per modified drawing no. 122667a. NDT for cracks and defects are required for item number 2 and 3. Chemical analysis for 5 elements and hardness test report required for item no. 1, 2 and 3 from any Govt. approved test house. The breaking load test of the sample piece of the holding strip to know the ultimate tensile strength to prove the F.S. of 9 from CMRI, Dhanbad.
   1 inch dia. H.T. rivets must be used on the top and bottom of cage in the hangers etc.
   The tenderers should see the cage at Moonidih project and prepare the detailed dimensional drawing, bill of material and get it approved from Colliery Engineer (E&M), MND.

INSPECTION:
Stage 1: All materials with required test certificates;
Stage 2: Fabricated cage before riveting;
Stage 3: At the time of riveting. Final acceptance after trial run in shaft 1.
The Four Deck Cage consists of the following units:

(1) The frame together with bonnet  (2) Guide Shoes  (3) Doors  (4) Railing and roof.

1. THE FRAME TOGETHER WITH BONNET:-

The frame of the cage is constructed of middle and corner members. The side wall are perforated iron plates. The bonnet on top of the frame has a very rigid construction as it carries the greatest load. It consists of frame of angles 90X90X12 mm connected by means of 20 Mn2 plates of 10 mm thick and a bracing for the rollers guides. The channels 300mm reinforced in webs and sides with 20 mm steel plates of 20 Mn2 Grade fitted in the middle of the bonnet to hold the draw bar. The attachment of the balance rope is fastened to two crossbars of 300mm channels reinforced with 20 mm plate grade of 20 Mn2 in the web fixed to the lower section of the centre members. A door opening in the roof of the bonnet facilitates the loading and lowering of long materials.

The hangers will be made of flats 180x12mm flats in single length of C45 grade steel if it is jointed due to non availability/ non manufacture of flats in single length should be as per ANNEXURE-A and modified drawing 122667a. The main hangers and tie members are riveted to the bonnet and bottom frame with rivets of 1” (inch) diameter. The bottom frame holds the balance rope and the guide roller. Dogs fixed to the front plates of the bonnet will hold the cage on the keep gear in the head frame in the case of over winding it up to the bumper beams. Angles guide shoes are attached to the corners of the bonnet and of the decks. They will guide the cage in the inset frames at shaft bottom where the front guides discontinue.

Riveting is to be done properly after heating the rivets for the required temperature so as to fit the rivet tightly without and void. The status of tightness of rivets can be tested by hearing the sound while hitting the rivet with a test hammer. The unsound rivets are to be changed so as to nullify the localization of stress.

2. GUIDE SHOES :-

The guide shoes to provide protection when degree of misalignment is more in case of failure of the guide rollers.

3. DOORS

When workmen are wound in the shaft the cage at every deck is protected by doors on both ends hung on hinges for the purpose. The locks in the hinge of the door will prevent the inadvertent unhinging of the door. The door locks are to0 be provided on both sides from outside as well as inside. The construction and fitting of the door must prevent the door from being swung to outside. The frames in 6mm M.S. sheet with out any joining and 2mm G.I. Sheet for the perorated plate in the door as well as in the side wall of the cage.

4. RAILING AND THE ROOF

To protect the team inspecting the shaft when riding on top of the cage, there will be a roof above the railings as per the drawing.

INSPECTION OF THE CAGE FABRICATION

The inspection of the cage will be done in three phases and the final acceptance of cage will be done after trial run in the shaft No.- I.

Inspection of materials:- After the arrival of all material along with all test certificates required for manufacturing of cage as per the drawing and Annexure-MNDCAGE, Annexure-A before start of any fabrication work. The party has to intimate the arrival of materials and certificates along with the date inspection in writing.

Inspection of cage fabrication:- Intermediate stage inspections of the cage will be done at the time of fabrication of frames before start of any riveting. All the structures and frames are to be assembled in boots and nuts. The party has to intimate the likely date of start of riveting so as to put one representative to check the riveting and unsound rivets are to be changed.

Inspection before dispatch:- Fabricated cage will be inspected for dimensions and workmanship as per drawing and Annexure- MNDCAGE. No certificate of acceptance will be given. Final acceptance of cage will be after satisfactory trial run of the fabricated cage in shaft No.-I.

TECHNICAL SPECIFICATION OF THE FOUR DECK CAGE:-

The fabrication of the cage is to be done as per the enclosed assembly drawing No. 122667 and ANNEXURE- MNDCAGE. The cage is subjected to a load of 30 tonnes at a speed of 8m/sec with a factor of safety of 9.

1. The material of the rivets as per IS: 1149: 1957 (high tensile grade En-3a)
2. The material of draw bar fitting plates & the associated plated on top of the cage and the balance rope attachment fitting section and the associated side plates in the bottom of cage must be of 20 Mn2 grade.

3. The eight main holding strips (180mm X 12mm X 9400mm) to be used in single length. The material of the hangers is C 45 Gr. Steel. If the hangers are not available/manufactured in single length, joints allowed as per modified drawing No. 122667a.

The breaking load test of the samples piece so the holding strip to know the ultimate tensile strength to prove the F.S. of 9 from CMRI, Dhanbad 1 (one) inch dia H.T. rivets must be used on top and bottom of cage hangers etc. the assemble cage must be perfectly straight and balanced. The tenderers may be asked to see the cage at Moonidih and to prepare the detailed dimensioned drawing bill of materials and get it approved from colliery Engineer, Moonidih.

Following components of the four deck cage are to be conducted for NDT and Chemical analysis, etc. Any further/additional materials to be tested as per the order of the colliery Engineer.
